

Tableau Assignment 2 – Report

1. Bullet Chart

This chart is set up to compare the **Actual Closing Price** of Tesla against the **Average Closing Price** of Tesla over the period. It uses two measures, `AVG(Tesla Actual Close)` and `AGG(Tesla Average)`, and is segmented by `Company` (though the data is only for Tesla in the image provided)

2. Bar-in-Bar Chart

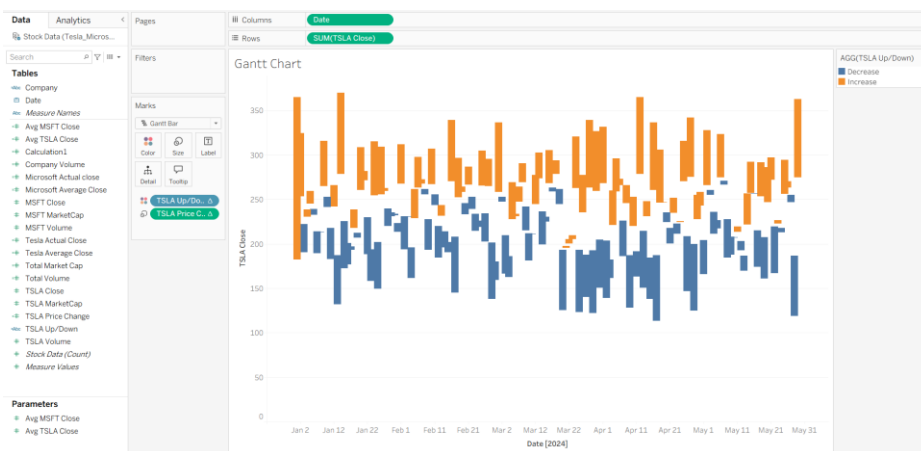

This chart compares the **Total Trading Volume** for Microsoft (MSFT Volume) and Tesla (TSLA Volume) side-by-side using the bar-in-bar technique. MSFT appears to have a higher total volume over the period shown, reaching approximately 6000M (6 billion).

3. Heat Map

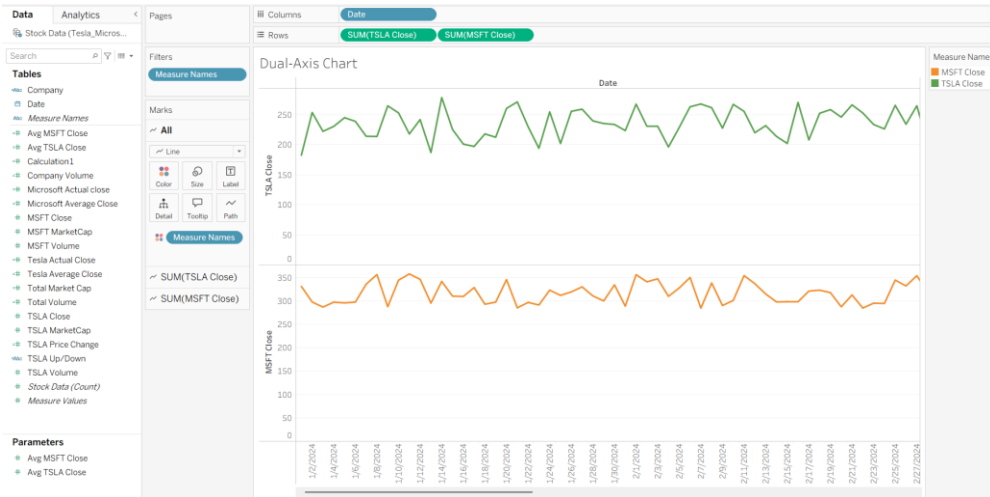

This chart visualizes the **Total Volume** across different **Months** (January to May) and **Weekdays**. Color intensity represents the total trading volume, with darker colors indicating higher volume periods. This helps identify the busiest trading days of the week and months.

4. Gantt Chart

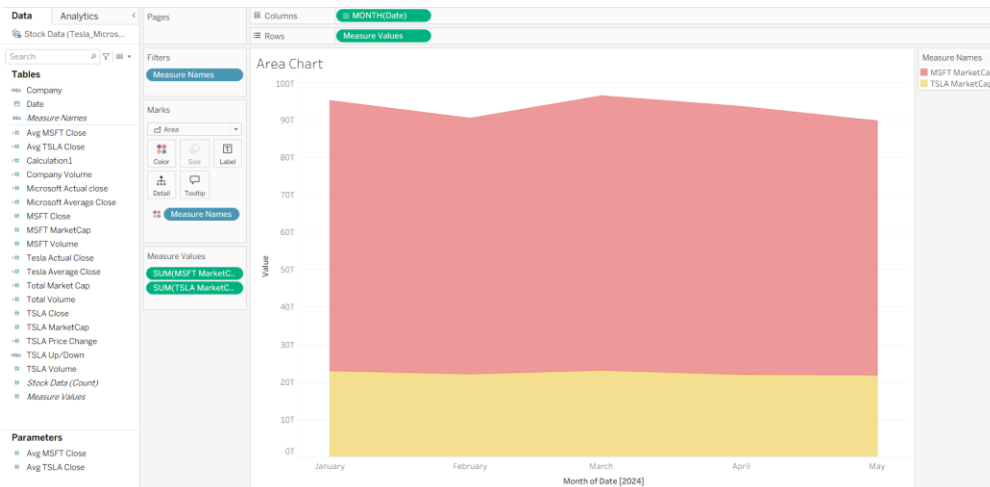

This chart displays the daily **TSLA Close** price range, where the length of each bar represents the price fluctuation on a given day. The colors indicate whether the closing price was an **Increase** (Orange) or a **Decrease** (Blue) compared to the previous day, showing daily volatility and directional change over the full time period.

5. Dual-Axis Chart

This chart uses two separate y-axes to plot the daily **MSFT Close** (Green line, bottom axis) and **TSLA Close** (Orange line, top axis) prices on the same date timeline. It allows for a detailed day-to-day comparison of the stock prices over a specific period (partially displayed from January to late February 2024)

6. Area Chart

This chart compares the **Market Capitalization** of MSFT and TSLA over the months from January to May 2024. It is a stacked area chart, clearly showing that MSFT MarketCap (Red/Pink area) is significantly larger than TSLA MarketCap (Yellow area) throughout the period
